

THE WASTE INDUSTRY'S TIRE FLATPROOFING SOLUTION

IT'S WHAT'S INSIDE
THAT COUNTS

**Why only settle for eliminating flat tires,
when you can also have:**

- **Improved Operator Comfort and Safety**
- **Greater Traction and Stability**
- **Reduced Loader Damage**
- **Comparable Tire Cost per Hour**
- **Best Sustainability Option for Flatproof Tires**

TyrFil - The Waste Industry's Tire Flatproofing Solution

Lower back and joint injury claims? Lower back pain and whole body vibration are often a result of excessive G-force transmissions from solid aperture tires. This is what is known in the industry as – **Solid Shock!**

***PERFORMANCE TESTS SHOW THAT
TYRFIL HAS THE LEAST G-FORCE IMPACT!***

G-force is the measurement of acceleration felt as weight.

Tires creating added expenses? Pneumatic tires with TyrFil provide improved ride and stability not found in solid aperture tires. Data is clear in determining that cost and frequency of equipment maintenance and repair are substantially higher when solid tires are used instead of pneumatic tires processed with TyrFil flatproofing. Protect your equipment investment with TyrFil.

Enough traction and stability? Pneumatic filled tires offer the deflection capabilities to offer maximum traction and stability. The optimal traction and stability provided by TyrFil will ease your operator's mind and promote their safety.

Sustainability initiatives? TyrFil is the right investment for sustainability minded companies looking to reduce their carbon footprint. TyrFil helps to eliminate whole tire and tire scrap waste from clogging our already over-cluttered global landfills. Also, the polyurethane in filled tires can be reclaimed much easier than the rubber in solid tires, reducing environmental impact.
